### Millions Of Instructions Per Second Usage

#### HTML for MIPS Acronym

##### when MIPS means Millions Of Instructions Per Second

New! Now updated with the inheritance rules for the [title attribute](#) in [HTML 5](#)

The easiest way to create HTML code indicating that the acronym **MIPS** stands for **Millions Of Instructions Per Second** is to simply include the acronym in an HTML `<a>` tag and an abbreviation tag (not an [acronym tag](#)):

```
<a href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/" title="Millions Of Instructions Per Second"
onclick="if (confirm('MIPS stands for Millions Of Instructions Per Second')) return false;"
>
<abbr>MIPS</abbr>
</a>
```

This is the recommended code for both HTML 4 browsers and HTML 5 browsers. Some browsers, most notably IE, do not activate help when the title attribute is coded on the `<abbr>` tag, but they do work as expected for titles on the `<a>` tag. The `<abbr>` tag inherits its title attribute from the parent `<a>` tag.

If you are creating HTML code for the definition of **Millions Of Instructions Per Second**, the meaning of the acronym MIPS, then include a [<dfn> definition tag](#) around the [<abbr> abbreviation tag](#) and follow the entire HTML code for the hypertext link with the definition of the term:

```
<p>A <a href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/" title="Millions Of Instructions Per Second"
onclick="if (confirm('MIPS stands for Millions Of Instructions Per Second')) return false;"
>
<dfn><abbr title="Millions Of Instructions Per Second">MIPS</abbr>
</a> is ...(definition of Millions Of Instructions Per Second)....</p>
```

The `<dfn>` tag gets the term being defined from the title attribute of the `<abbr>` tag. The result should look like this (hovering your mouse over the MIPS acronym shows the expanded meaning of the acronym):

A [MIPS](#) is ...(definition of "Millions Of Instructions Per Second")....

If you are creating HTML code that simply expands the acronym then indicate that it is the MIPS acronym which is being defined using an HTML `<dfn>` tag with a title attribute around the `<abbr>` tag and follow the HTML for the hypertext link with the acronym definition:

```
<p>When we use the acronym <a href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/"
title="Millions Of Instructions Per Second"
onclick="if (confirm('MIPS stands for Millions Of Instructions Per Second')) return false;"
>
<dfn title="MIPS"><abbr title="Millions Of Instructions Per Second">MIPS</abbr></dfn>
</a> it is the abbreviation for Millions Of Instructions Per Second.</p>
```

# Millions Of Instructions Per Second

The result should look like this (hovering your mouse over the MIPS acronym shows the definition):

When we use the acronym [MIPS](#) it is the abbreviation for Millions Of Instructions Per Second.

## Acronym Vocabulary URI Declaration

For the remaining examples, the Acronym Vocabulary namespace URI needs to be declared for use with element tag names and attribute values. For an HTML web page, the beginning of the file should look like this:

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE html [
<!ENTITY at "http://Acronyms.net/terms/">
<!ENTITY av "http://Acronyms.net/vocabulary/">
]>
<html xmlns="http://www.w3.org/1999/xhtml" xmlns:av="&av;">
<head>
<style type="text/css">
.hide { display: none }
</style>
```

...  
This only needs to be done once per document file.

## XLink simple link

First, [declare the vocabulary](#) as shown above. Then, add acronyms as follows:

```
<a href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/" title="Millions Of Instructions Per Second"
xlink:type="simple"
xlink:href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/"

<span class="hide" xlink:type="arc" xlink:from="acronym" xlink:arcrole="&av;pronounceAs" xlink:to="verbal"
xlink:actuate="onLoad"/>
<span class="hide" xlink:type="arc" xlink:from="acronym" xlink:arcrole="&av;expandsTo" xlink:to="expand"/>
<span class="hide" xlink:type="arc" xlink:from="acronym" xlink:arcrole="&av;standsFor" xlink:to="term"/>
<span class="hide" xlink:type="arc" xlink:from="term" xlink:arcrole="&av;definedAt" xlink:to="definition"
```

# Millions Of Instructions Per Second

```
xlink:show="new" xlink:actuate="onRequest"/>
<span class="hide" xlink:type="arc" xlink:from="acronym" xlink:arcrole="&av;foundAt" xlink:to="finder"
xlink:show="new" xlink:actuate="onRequest"/>
</a>
```

## embedded RDF metadata

First, [declare the vocabulary](#) as shown above. Then, add acronyms as follows:

```
<a href="http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second/" title="Millions Of Instructions Per
Second">
<abbr>MIPS</abbr>
</a>
```

## URI Reference for Millions Of Instructions Per Second

### URI Reference for Advanced Webmasters

This page is intended for advanced users, such as developers who are creating XML documents or building Semantic Web sites, who want to code their own simple or extended links, or RDF metadata. For all other purposes, the [HTML hypertext links](#), which show the proper usage of URI References, should be used instead.

In RDF or XML documents, refer to the abstract concept of **Millions Of Instructions Per Second** using this URI reference:

**<http://Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second>**

or, declare the &at; entity as shown below and use:

**&at;MillionsOfInstructionsPerSecond**

Note that a URI Reference is case-sensitive, and that www. is omitted since it is not intended to be a web-accessible resource.

Use the following URL to refer to the web page that defines this term:

**<http://www.Acronyms.net/terms/m/Millions-Of-Instructions-Per-Second>**

## Examples

### Acronym Vocabulary URI Declaration

The Acronym Vocabulary namespace URI needs to be declared for use with element tag names and attribute values. The beginning of an HTML document should look like this:

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE html [
<!ENTITY at "http://Acronyms.net/terms/">
<!ENTITY av "http://Acronyms.net/vocabulary/">
]>
<html xmlns="http://www.w3.org/1999/xhtml" xmlns:av="&av;">
<head>
<style type="text/css">
.hide { display: none }
</style>
```

...  
This only needs to be done once per document file.

### XLink Simple Link

```
