Really Simple Syndication Usage

HTML for RSS Acronym

when RSS means Really Simple Syndication

New! Now updated with the inheritance rules for the [title attribute](#) in [HTML 5](#)

The easiest way to create HTML code indicating that the acronym **RSS** stands for **Really Simple Syndication** is to simply include the acronym in an HTML `<a>` tag and an abbreviation tag (not an [acronym tag](#)):

```
<a href="http://www.Acronyms.net/terms/r/Really-Simple-Syndication/" title="Really Simple Syndication"
onclick="if (confirm('RSS stands for Really Simple Syndication')) return false;"
>
<abbr>RSS</abbr>
</a>
```

This is the recommended code for both HTML 4 browsers and HTML 5 browsers. Some browsers, most notably IE, do not activate help when the title attribute is coded on the `<abbr>` tag, but they do work as expected for titles on the `<a>` tag. The `<abbr>` tag inherits its title attribute from the parent `<a>` tag.

If you are creating HTML code for the definition of **Really Simple Syndication**, the meaning of the acronym RSS, then include a [<dfn> definition tag](#) around the [<abbr> abbreviation tag](#) and follow the entire HTML code for the hypertext link with the definition of the term:

```
<p>A <a href="http://www.Acronyms.net/terms/r/Really-Simple-Syndication/" title="Really Simple Syndication"
onclick="if (confirm('RSS stands for Really Simple Syndication')) return false;"
>
<dfn><abbr title="Really Simple Syndication">RSS</abbr>
</a> is ...(definition of Really Simple Syndication)....</p>
```

The `<dfn>` tag gets the term being defined from the title attribute of the `<abbr>` tag. The result should look like this (hovering your mouse over the RSS acronym shows the expanded meaning of the acronym):

A [RSS](#) is ...(definition of "Really Simple Syndication")....

If you are creating HTML code that simply expands the acronym then indicate that it is the RSS acronym which is being defined using an HTML `<dfn>` tag with a title attribute around the `<abbr>` tag and follow the HTML for the hypertext link with the acronym definition:

```
<p>When we use the acronym <a href="http://www.Acronyms.net/terms/r/Really-Simple-Syndication/" title="Really
Simple Syndication"
onclick="if (confirm('RSS stands for Really Simple Syndication')) return false;"
>
<dfn title="RSS"><abbr title="Really Simple Syndication">RSS</abbr></dfn>
</a> it is the abbreviation for Really Simple Syndication.</p>
```

The result should look like this (hovering your mouse over the RSS acronym shows the definition):

When we use the acronym [RSS](#) it is the abbreviation for Really Simple Syndication.

Acronym Vocabulary URI Declaration

Really Simple Syndication

For the remaining examples, the Acronym Vocabulary namespace URI needs to be declared for use with element tag names and attribute values. For an HTML web page, the beginning of the file should look like this:

URI Reference for Really Simple Syndication

URI Reference for Advanced Webmasters

This page is intended for advanced users, such as developers who are creating XML documents or building Semantic Web sites, who want to code their own simple or extended links, or RDF metadata. For all other purposes, the [HTML hypertext links](#), which show the proper usage of URI References, should be used instead.

In RDF or XML documents, refer to the abstract concept of **Really Simple Syndication** using this URI reference:

`http://Acronyms.net/terms/r/Really-Simple-Syndication`

or, declare the `&at;` entity as shown below and use:

`&at;ReallySimpleSyndication`

Note that a URI Reference is case-sensitive, and that `www.` is omitted since it is not intended to be a web-accessible resource.

Use the following URL to refer to the web page that defines this term:

`http://www.Acronyms.net/terms/r/Really-Simple-Syndication`
