## Television Usage

#### HTML for TV Acronym when TV means Television

New! Now updated with the inheritance rules for the [title attribute](#) in [HTML 5](#)

The easiest way to create HTML code indicating that the acronym **TV** stands for **Television** is to simply include the acronym in an HTML `<a>` tag and an abbreviation tag (not an [acronym tag](#)):

```
<a href="http://www.Acronyms.net/terms/t/Television/" title="Television"
onclick="if (confirm('TV stands for Television')) return false;"
>
<abbr>TV</abbr>
</a>
```

This is the recommended code for both HTML 4 browsers and HTML 5 browsers. Some browsers, most notably IE, do not activate help when the title attribute is coded on the `<abbr>` tag, but they do work as expected for titles on the `<a>` tag. The `<abbr>` tag inherits its title attribute from the parent `<a>` tag.

If you are creating HTML code for the definition of **Television**, the meaning of the acronym TV, then include a [<dfn> definition tag](#) around the [<abbr> abbreviation tag](#) and follow the entire HTML code for the hypertext link with the definition of the term:

```
<p>A <a href="http://www.Acronyms.net/terms/t/Television/" title="Television"
onclick="if (confirm('TV stands for Television')) return false;"
>
<dfn><abbr title="Television">TV</abbr>
</a> is ...(definition of Television)....</p>
```

The `<dfn>` tag gets the term being defined from the title attribute of the `<abbr>` tag. The result should look like this (hovering your mouse over the TV acronym shows the expanded meaning of the acronym):

A [TV](#) is ...(definition of "Television")....

If you are creating HTML code that simply expands the acronym then indicate that it is the TV acronym which is being defined using an HTML `<dfn>` tag with a title attribute around the `<abbr>` tag and follow the HTML for the hypertext link with the acronym definition:

```
<p>When we use the acronym <a href="http://www.Acronyms.net/terms/t/Television/" title="Television"
onclick="if (confirm('TV stands for Television')) return false;"
>
<dfn title="TV"><abbr title="Television">TV</abbr></dfn>
</a> it is the abbreviation for Television.</p>
```

The result should look like this (hovering your mouse over the TV acronym shows the definition):

When we use the acronym [TV](#) it is the abbreviation for Television.

## URI Reference for Advanced Webmasters

This page is intended for advanced users, such as developers who are creating XML documents or building Semantic Web sites, who want to code their own simple or extended links, or RDF metadata. For all other purposes, the [HTML hypertext links](#), which show the proper usage of URI References, should be used instead.

In RDF or XML documents, refer to the abstract concept of **Television** using this URI reference:

**<http://Acronyms.net/terms/t/Television>**

or, declare the `&at;` entity as shown below and use:

**`&at;Television`**

Note that a URI Reference is case-sensitive, and that `www.` is omitted since it is not intended to be a web-accessible resource.

Use the following URL to refer to the web page that defines this term:

**<http://www.Acronyms.net/terms/t/Television>**
